

HW2. Serverless Computing

Design a web server (such as using the VM/Docker Container in HW1) that can generate a customized page, which includes a webhook that trigger the execution a cloud function to return some objects in the customized page.

The cloud function can be (1) AWS Lamda, (2) Google Cloud Functions, (3) Azure Functions, or (3) IBM Cloud Functions.

Submission:

- (1) A report that include some discussions and experiences learned.
- (2) A github URL which contains your source code of the project.

Note some other projects like those bout cloud functions in <https://codelabs.developers.google.com/> can be chosen instead.
